

CDC's National Center on Birth Defects and Developmental Disabilities

HAWAII

Improving Health Together through direct funding and national efforts

It is important to ensure babies are born healthy, children reach their full potential, and everyone thrives in Hawaii.

CDC's National Center on Birth Defects and Developmental Disabilities (NCBDDD) is committed to supporting Hawaii in its efforts to achieve this vision and here is how.

SAVING BABIES

through birth defects prevention and research

Birth defects impact nearly 1 in 33 babies born each year. NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive. NCBDDD research was instrumental in efforts to implement folic acid fortification—saving babies as well as millions in healthcare costs each year.

HELPING CHILDREN

live to the fullest by understanding developmental disabilities

NCBDDD is committed to tracking, researching, and providing useful tools and information on developmental disabilities. NCBDDD's **Learn the Signs. Act Early.** program collaborates with partners throughout

Hawaii to promote developmental monitoring, identify children with developmental delays, and connect those families with appropriate services.

The most recent data show 8.8% of U.S. children and 6.0% of children in Hawaii have a current diagnosis of attention-deficit/hyperactivity disorder, as reported by parents. NCBDDD supports the development of state policies and programs that make it easier for these children to receive behavior therapy.

NCBDDD's **Early Hearing Detection and Intervention** program in Hawaii successfully tested 98.7% (18,319) of newborn babies for hearing loss and identified 61 babies who were deaf or hard of hearing. These babies and their families will benefit from services that will keep their learning on par with their hearing peers.

PROTECTING PEOPLE and preventing complications of blood disorders

NCBDDD's work to protect the people of Hawaii from complications of blood disorders is broad-ranging. It includes understanding preventable blood transfusion complications; developing, implementing, and evaluating programs that help consumers and healthcare providers get critical information on preventing complications of blood disorders; and supporting best practices for blood clot prevention.

NCBDDD also supports one hemophilia treatment center in Hawaii through a national program. Hemophilia treatment centers are specialized healthcare centers that provide comprehensive care for hemophilia patients.

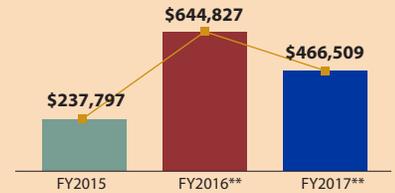

IMPROVING HEALTH of people with disabilities

More than 1 in 5 (22%) of American adults live with a disability. NCBDDD helps to ensure that individuals with a disability in Hawaii have the same opportunity for good health as those without a disability.

Programs funded by NCBDDD are being designed and implemented to improve the health of people with disabilities in Hawaii.

Annual Program Funding*

NCBDDD is directly funding

- Hawaii State Department of Health
(\$200,000)
- University of Hawaii
(\$266,509)
