

CDC's National Center on Birth Defects and Developmental Disabilities

KANSAS

Improving Health Together through direct funding and national efforts

It is important to ensure babies are born healthy, children reach their full potential, and everyone thrives in Kansas.

CDC's National Center on Birth Defects and Developmental Disabilities (NCBDDD) is committed to supporting Kansas in its efforts to achieve this vision and here is how.

SAVING BABIES

through birth defects prevention and research

Birth defects impact nearly 1 in 33 babies born each year. NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive. NCBDDD research was instrumental in efforts to implement folic acid fortification—saving babies as well as millions in healthcare costs each year.

NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive.

HELPING CHILDREN

live to the fullest by understanding developmental disabilities

NCBDDD is committed to tracking, researching, and providing useful tools and information on developmental disabilities. NCBDDD's **Learn the Signs. Act Early.** program collaborates with partners throughout Kansas to promote developmental monitoring, identify children with developmental delays, and connect those families with appropriate services and support as early as possible.

NCBDDD's **Early Hearing Detection and Intervention** program in Kansas successfully tested 98.6% (39,609) of newborn babies for hearing loss and identified 70 babies who were deaf or hard of hearing. These babies and their families will benefit from services that will keep their learning on par with their hearing peers.

PROTECTING PEOPLE

and preventing complications of blood disorders

NCBDDD's work to protect the people of Kansas from complications of blood disorders is broad-ranging. It includes understanding preventable blood transfusion complications; developing, implementing, and evaluating programs that help consumers and healthcare providers get critical information on preventing complications of blood disorders; and supporting best practices for blood clot prevention.

IMPROVING HEALTH

of people with disabilities

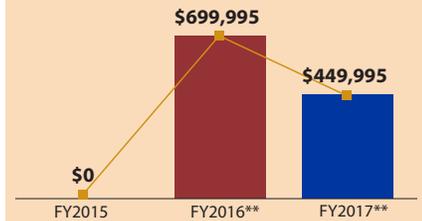

More than 1 in 5 (22%) of American adults live with a disability. As reported in CDC's **Disability and Health Data System**, 21.3% of adults in Kansas live with a disability. Healthcare expenditures related to disability cost Kansas \$3.4 billion per year and account for 24% of total healthcare expenditures for Kansas.*

NCBDDD helps to ensure that individuals with a disability in Kansas have the same opportunity for good health as those without a disability. Despite progress, adults with disabilities in Kansas and across the country continue to experience significant differences in health characteristics and behaviors compared to adults without disabilities.

Programs funded by NCBDDD are being designed and implemented to improve the health of people with disabilities in Kansas, such as the **Kansas Disability and Health Program's** medical and service provider training.

* Disability-associated healthcare expenditures are presented in 2006 dollars as reported in Anderson WL, et al. Estimates of state-level health-care expenditures associated with disability. Public Health Rep. 2010 Jan-Feb;125(1);44-51.

Annual Program Funding*

NCBDDD is directly funding

- University of Kansas Center for Research, Inc. (\$299,995)
- Kansas Department of Health and Environment (\$150,000)

* More information about NCBDDD and our support in Kansas is available at www.cdc.gov/ncbddd/aboutus/report/index.html
