

NEW YORK

Improving Health Together through direct funding and national efforts

It is important to ensure babies are born healthy, children reach their full potential, and everyone thrives in New York. CDC's National Center on Birth Defects and Developmental Disabilities (NCBDDD) is committed to supporting New York in its efforts to achieve this vision and here is how.

SAVING BABIES

through birth defects prevention and research

Birth defects impact nearly 1 in 33 babies born each year. NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive. NCBDDD research was instrumental in efforts to implement folic acid fortification—saving babies as well as millions in healthcare costs each year.

NCBDDD supports the New York Center for Birth Defects Research and Prevention, which studies environmental, genetic, and behavioral factors that might cause birth defects.

HELPING CHILDREN

live to the fullest by understanding developmental disabilities

NCBDDD is committed to tracking, researching, and providing useful tools and information on developmental disabilities. NCBDDD's **Learn the Signs. Act Early.** program collaborates with partners throughout

New York to promote developmental monitoring, identify children with developmental delays, and connect those families with appropriate services.

The most recent data show 8.8% of U.S. children and 7.7% of children in New York have a current diagnosis of attention-deficit/hyperactivity disorder, as reported by parents. NCBDDD supports the development of state policies and programs that make it easier for these children to receive behavior therapy.

NCBDDD's **Early Hearing Detection and Intervention** program in New York successfully tested 90.4% (216,169) of newborn babies for hearing loss and identified 142 babies who were deaf or hard of hearing. These babies and their families will benefit from services that will keep their learning on par with their hearing peers.

PROTECTING PEOPLE

and preventing complications of blood disorders

NCBDDD's work to protect the people of New York from complications of blood disorders is broad-ranging. It includes understanding preventable blood transfusion complications; developing, implementing, and evaluating programs that help consumers and healthcare providers get critical information on preventing complications of blood disorders; and supporting best practices for blood clot prevention.

NCBDDD also supports nine hemophilia treatment centers in New York through a national program. Hemophilia treatment centers are specialized healthcare centers that provide comprehensive care for patients with hemophilia.

IMPROVING HEALTH

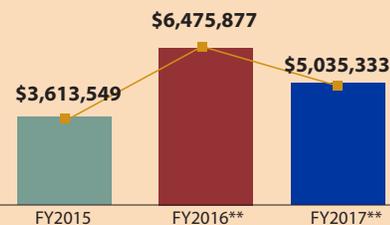

of people with disabilities

More than 1 in 5 (22%) of American adults live with a disability. NCBDDD helps to ensure that individuals with a disability in New York have the same opportunity for good health as those without a disability. Despite progress, adults with disabilities in New York and across the country continue to experience significant differences in health characteristics and behaviors compared to adults without disabilities.

Programs funded by NCBDDD are being designed and implemented to improve the health of people with disabilities in New York.

NCBDDD funds the New York Department of Health to develop population-based estimates of congenital heart disease and expand our understanding of the healthcare needs and long-term outcomes of adolescents and adults with congenital heart disease. The goal is to improve the health of people with congenital heart disease and avoid preventable deaths.

Annual Program Funding*

NCBDDD is directly funding

- New York State Department of Health (\$2,491,181)
- New York City Department of Health (\$352,287)
- Tourette Syndrome Association, Inc. (\$900,000)
- Cooley's Anemia Foundation, Inc. (\$150,000)
- National Hemophilia Foundation (\$593,000)
- New York State Psychiatric Institute (\$199,004)
- Institute for Basic Res in Developmental Disabilities (\$349,861)
