

OHIO

Improving Health Together through direct funding and national efforts

It is important to ensure babies are born healthy, children reach their full potential, and everyone thrives in Ohio.

CDC's National Center on Birth Defects and Developmental Disabilities (NCBDDD) is committed to supporting Ohio in its efforts to achieve this vision and here is how.

SAVING BABIES

through birth defects prevention and research

Birth defects impact nearly 1 in 33 babies born each year. NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive. NCBDDD research was instrumental in efforts to implement folic acid fortification—saving babies as well as millions in healthcare costs each year.

NCBDDD leads efforts to respond to the opioid epidemic's impact on babies—both potential birth defects and longer term developmental challenges.

\$280,000

HELPING CHILDREN

live to the fullest by understanding developmental disabilities

NCBDDD is committed to tracking, researching, and providing useful tools and information on developmental disabilities. NCBDDD's **Learn the Signs. Act Early.** program collaborates with partners throughout Ohio to promote developmental monitoring, identify children with developmental delays, and connect those families with appropriate services and support as early as possible.

NCBDDD's **Early Hearing Detection and Intervention** program in Ohio successfully tested 97.2% (136,622) of newborn babies for hearing loss and identified 204 babies who were deaf or hard of hearing. These babies and their families will benefit from services that will keep their learning on par with their hearing peers.

PROTECTING PEOPLE

and preventing complications of blood disorders

NCBDDD's work to protect the people of Ohio from complications of blood disorders is broad-ranging. It includes understanding preventable blood transfusion complications; developing, implementing, and evaluating programs that help consumers and healthcare providers get critical information on preventing complications of blood disorders; and supporting best practices for blood clot prevention.

NCBDDD also supports eight hemophilia treatment centers in Ohio through a national program. Hemophilia treatment centers are specialized healthcare centers that provide comprehensive care for patients with hemophilia.

IMPROVING HEALTH

of people with disabilities

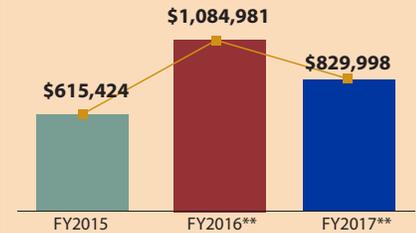

More than 1 in 5 (22%) of American adults live with a disability. As reported in CDC's **Disability and Health Data System**, 23.3% of adults in Ohio live with a disability. Healthcare expenditures related to disability cost Ohio \$18.9 billion per year and account for 30% of total healthcare expenditures for Ohio.*

NCBDDD helps to ensure that individuals with a disability in Ohio have the same opportunity for good health as those without a disability. Despite progress, adults with disabilities in Ohio and across the country continue to experience significant differences in health characteristics and behaviors compared to adults without disabilities.

Programs funded by NCBDDD are being designed and implemented to improve the health of people with disabilities in Ohio, such as trainings provided by the National Center on Health, Physical Activity, and Disability.

* Disability-associated healthcare expenditures are presented in 2006 dollars as reported in Anderson WL, et al. Estimates of state-level health-care expenditures associated with disability. Public Health Rep. 2010 Jan-Feb;125(1);44-51.

Annual Program Funding*

NCBDDD is directly funding

- Ohio Department of Health (\$430,000)
- Ohio State University (\$300,000)
- Cincinnati Children's Hospital Medical Center (\$99,998)

* More information about NCBDDD and our support in Ohio is available at www.cdc.gov/ncbddd/aboutus/report/index.html
