

SOUTH DAKOTA

Improving Health Together through direct funding and national efforts

It is important to ensure babies are born healthy, children reach their full potential, and everyone thrives in South Dakota. CDC's National Center on Birth Defects and Developmental Disabilities (NCBDDD) is committed to supporting South Dakota in its efforts to achieve this vision and here is how.

SAVING BABIES

through birth defects prevention and research

Birth defects impact nearly 1 in 33 babies born each year. NCBDDD's state-based birth defects tracking and research identify causes of birth defects, opportunities to prevent them, and form the foundation for helping babies thrive. NCBDDD research was instrumental in efforts to implement folic acid fortification—saving babies as well as millions in healthcare costs each year.

HELPING CHILDREN

live to the fullest by understanding developmental disabilities

NCBDDD is committed to tracking, researching, and providing useful tools and information on developmental disabilities. NCBDDD's **Learn the Signs. Act Early.** program collaborates with partners throughout

HELPING
CHILDREN
\$148,459

South Dakota to promote developmental monitoring, identify children with developmental delays, and connect those families with appropriate services and support as early as possible.

NCBDDD's **Early Hearing Detection and Intervention** program in South Dakota successfully tested 98.6% (12,777) of newborn babies for hearing loss and identified 33 babies who were deaf or hard of hearing. These babies and their families will benefit from services that will keep their learning on par with their hearing peers.

PROTECTING PEOPLE

and preventing complications of blood disorders

NCBDDD's work to protect the people of South Dakota from complications of blood disorders is broad-ranging. It includes understanding preventable blood transfusion complications; developing, implementing, and evaluating programs that help consumers and healthcare providers get critical information on preventing complications of blood disorders; and supporting best practices for blood clot prevention.

NCBDDD also supports one hemophilia treatment center in South Dakota through a national program. Hemophilia treatment centers are specialized healthcare centers that provide comprehensive care for patients with hemophilia.

IMPROVING HEALTH

of people with disabilities

More than 1 in 5 (22%) of American adults live with a disability. NCBDDD helps to ensure that individuals with a disability in South Dakota have the same opportunity for good health as those without a disability.

Programs funded by NCBDDD are being designed and implemented to improve the health of people with disabilities in South Dakota.
