

Adult Congenital Heart Association

Webinars Presents:

Imaging Techniques in ACHD: What's New?

Wed, May 9, 2018, 7 p.m. – 8 p.m. EDT

Presenter: David Gregg, MD

About the Webinar

Did you know that regular follow up for adults with congenital heart disease (ACHD) helps guide treatment and monitor for complications? Are you aware that imaging techniques are a part of that follow up? Imaging allows doctors to look inside your heart to understand the structure and function. Did you know that as an ACHD patient, one or more different imaging techniques might be used? Each method has unique benefits and limitations. Dr. David Gregg, ACHD cardiologist, will discuss the different ACHD imaging techniques, the questions they may help answer, and their limitations. You don't want to miss this webinar. Register today.

About the Presenter

David Gregg, MD, is the director of the Adult Congenital Heart Disease (ACHD) Program at the Medical University of South Carolina and the director of the Adult Echocardiography lab. He publishes and lectures regularly on imaging in ACHD and multimodality imaging. He serves on the Medical Advisory Board of the Adult Congenital Heart Association and is excited to talk with you about imaging in ACHD.

About the Adult Congenital Heart Association

The Adult Congenital Heart Association (ACHA) is a national not-for-profit organization dedicated to improving the quality of life and extending the lives of adults with congenital heart disease (CHD). ACHA serves and supports the more than one million adults with CHD, their families and the medical community—working with them to address the unmet needs of the long-term survivors of congenital heart defects through education, outreach, advocacy, and promotion of ACHD research. For more information about ACHA, contact (888) 921-ACHA or visit www.achaheart.org.
